

Paycheck Protection Program (PPP) Loan Forgiveness Application

BPMLinks has developed an end-to-end comprehensive digital application for Paycheck Protection Program (PPP) Loan Forgiveness. The application is aimed at simplifying the entire process for the borrower and lender workflow synchronization, thus making the overall experience of collecting documents, lender reviews, lender decision making, automated next-best-action and final submission to the SBA seamless. The solution uses e-signatures to ensure security and compliance. It has a real-time integration with the SBA by leveraging SBA Forgiveness APIs. The solution has an in-built Notification management to notify the borrowers and lenders on the real-time statuses of the Forgiveness application. An in-built amortization algorithm calculates the unforgiven balances and notifies the term of payment to the borrower. This enables the borrower to request for payment extension with the lender, which the lender can accept or reject.
